

DSU, UD, Delaware Tech Reaffirm Partnership Commitment

Posted: April 5, 2011

Delaware State University, along with the University of Delaware and Delaware Technical & Community College, joined with Gov. Jack Markell to emphasize the unique partnership among the public institutions of higher education in the First State.

DSU President Harry L. Williams, UD President Patrick T. Harker and Delaware Tech President Orlando J. George Jr. along with Gov. Markell signed a proclamation that reaffirms the three institutions' commitment to partner in ways that will support, enhance and protect the future of the state of Delaware.

"This collaboration plays out in two ways? one is for students? and the other has to do with faculty," Gov. Markell said. He noted that students will benefit by the connective collaboration between Delaware Tech and the two four-year institutions in ways that will facilitate the continuation of their academic journey. The governor added that the partnership of faculty members in research will make a powerful case that federal funding would be effectively used in Delaware.

Dr. Williams said Delaware provides a great environment for such partnerships.

"We are fortunate to be in Delaware; elsewhere there are states that are cutting funding to higher education," Dr. Williams said. "We want the support and that we are working together and will continue to work together."

Dr. George used the example of math education to show how the institutions are collaborating toward the academic success of students.

"At Delaware Tech, math students take courses up to calculus and are already to be junior at either of the institutions and continue working towards a math education degree," Dr. George said. "We have been doing (such collaborations) for some time now; this was an opportunity today to tell this story in a very public setting."

Dr. Harker said such higher education partnerships are the standard in Delaware.

"If we can't work together in this small state, we're in trouble," Dr. Harker said.
